

Quooker®

Never wait for a tap to run hot again

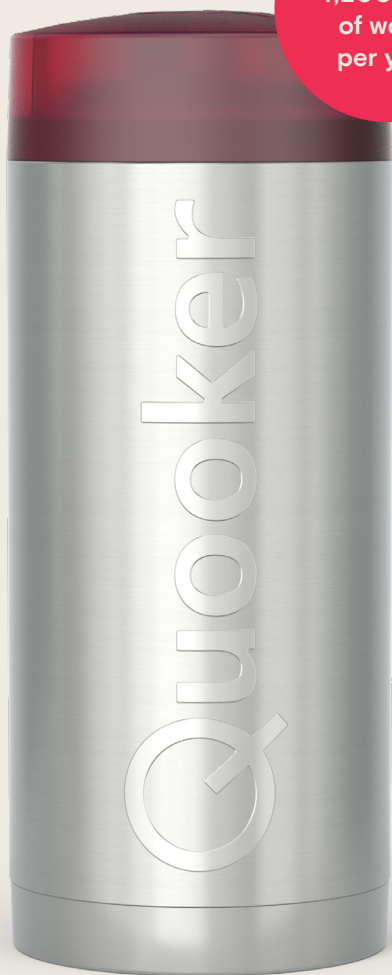

Meet the new Quooker COMBI+

Instant 100°C boiling water, that's what every Quooker tap does. But what about normal hot water? You might still be waiting a minute or more for your standard mixer tap to run hot. That's precious time and litres of water down the drain. Luckily, there's now an answer:

COMBI+

With COMBI+, when you turn on the hot tap, Quooker checks the temperature straight off. If it's not up to 40°C, Quooker adds just the right amount of boiling water so it's always immediately hand-hot. Saving up to 4,200 litres of water each year. Ask about our COMBI+.
